Rapid mechanical seal access without motor removal

- Lifetime of no alignment
- Footed volute and motor require no base

• No grouting

• Integrally cast diffuser vane reduces turbulence and need for suction guides

11.1.8 Shaft seals

(0 °C) are mainly intended for coolants.

The operating range of the seals is described for two main applications: pumping of water or pumping of coolants. Seals with a temperature range of 32 °F (0 °C) and up are mainly used for pumping water, while seals for temperatures below 32 °F 1

We do not recommend that you operate the pump at maximum temperature and maximum pressure at the same time, as it results in reduced seal life and the occurrence of periodic noise.
