- Rapid mechanical seal access without motor removal
  - Lifetime of no alignment
  - Footed volute and motor require no base
    - No grouting
- Integrally cast diffuser vane reduces turbulence and need for suction guides

#### 11.1.8 Shaft seals

The operating range of the seals is described for two main applications: pumping of water or pumping of coolants.

Seals with a temperature range of 32 °F (0 °C) and up are mainly used for pumping water, while seals for temperatures below 32 °F (0 °C) are mainly intended for coolants.

We do not recommend that you operate the pump at maximum temperature and maximum pressure at the same time, as it results in reduced seal life and the occurrence of periodic noise.
